Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8,25 drawn to fee based network, classified in class 709, subclass 250.
- II. Claims 9-16, drawn to a method of electronic shopping, classified in class 705, subclass 26.
- III. Claims 17-24, drawn to a storage medium, classified in class 369, subclass 272.

The inventions are distinct, each from the other because:

Inventions I and II,III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a storage memory for parking data. See MPEP § 806.05(d).

Inventions II and I,III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a method of controlled access to a virtual space by limits set by owner, e.g. passwords. See MPEP § 806.05(d).

Inventions III and I,II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as a medium on which music is recorded and played. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
